## Gas Production Commences from PV-12

The Operator of the Palm Valley field, Central Petroleum Limited (“**Central**”) (**ASX:CTP**) has advised that the Palm Valley 12 (**PV12**) well has been tied-in and commenced flow testing on 28 November 2022. After a period of ramp-up the well flowed at a stable, wellhead skid-limited rate of ~10TJ which exceeded pre-drill expectations.

Palm Valley field capacity is expected to approach the maximum plant capacity of 15 TJ/d in mid-December once a scheduled compressor overhaul is completed.

The added Palm Valley production will allow for new firm and spot sales into what continues to be strong Northern Territory and east coast gas markets.

The PV12 well was drilled under a joint venture between Central (50% interest), New Zealand Oil & Gas Limited (**ASX: NZO**) (35% interest) and Cue Energy Resources Limited (**ASX: CUE**) (15% interest).
